

Soufiane Oulkadi

Computer Engineering Student – DevOps / Network Engineering

Morocco — oulkadi.soufiane1@gmail.com — +212 619 076 490 — github.com/S0uf12n8

Profile

Computer Engineering student (Licence Génie Informatique, final year) and former Network & IT Technician with 5+ months of enterprise experience in Cisco switching, VoIP administration (Avaya), and IT support/ticketing (GLPI). Building hands-on DevOps competency through a self-managed Infrastructure-as-Code homelab (Ansible, Docker, Oracle Cloud) and backend leadership on ACOMED, a full-stack offline-first platform (Node.js, PostgreSQL, REST API, SQLite sync). Strong fundamentals in C/C++ (data structures, memory management, OOP) and Linux system administration. Targeting Network Engineering, System Administration, and DevOps/DevSecOps roles.

Professional Experience

Network and IT Technician

Nov 2025 – Jan 2026

DEWEB Technology

- Converted from intern to full-time technician within two months after demonstrating strong on-site performance.
- Configured and administered Cisco Layer 2 switches: VLANs, IP addressing, and switching policies.
- Deployed and maintained Grandstream and other vendor hardware across client sites.
- Managed the GLPI ticketing platform for SGTm (large enterprise client): incident analysis, resolution, and escalation.
- Administered VoIP services on Avaya IP Office: SIP account provisioning, extensions, and troubleshooting.
- Documented an industrial factory's network infrastructure, producing diagrams and operational procedures.
- Provided hands-on technical support for IT infrastructure: racks, UPS units, and switches.

IT Infrastructure and Support Intern

Sep 2025 – Nov 2025

DEWEB Technology

- Assisted with network configuration (VLANs, IP addressing) and on-site interventions.
- Supported field teams during technical operations and documented incidents.

Projects

Homelab-as-Code — Infrastructure as Code Homelab

Designer & Sole Maintainer

Independent Project

github.com/S0uf12n8/homelab-as-code

- Self-built, production-inspired DevOps homelab provisioned on Oracle Cloud Free Tier, with every change version-controlled and applied through Infrastructure as Code – no manual server configuration.
- Authored Ansible playbooks and roles to fully automate Linux hardening on Ubuntu Server: SSH key-only authentication, UFW firewall rules, Fail2Ban intrusion prevention, unattended security updates, and Chrony time synchronization.
- Automated deployment and lifecycle management of containerized workloads with Docker and Docker Compose (multi-container stacks, custom networks, persistent volumes) entirely through Ansible.
- Actively extending the platform toward Kubernetes (k3s), GitOps with Argo CD, an observability stack (Prometheus, Grafana, Loki), and CI/CD with GitHub Actions – roadmap and architecture documented in the repository.

ACOMED — Offline-First Medical Compliance Platform

Projet de Fin d'Études (PFE)

Backend Lead & Project Manager

- Offline-first mobile platform for medical compliance auditing. Stack: Node.js, Express, PostgreSQL (backend); SQLite (offline); React Native (mobile, team).
- Designed the REST API, PostgreSQL schema, and offline sync logic with conflict resolution (delta sync via timestamps, last-write-wins).
- Led a team across mobile, backend, and dashboard repositories; project in active development.

RPG Combat Game — C++ (OOP)

Semester Project

Team Lead

- Terminal-based RPG combat engine in C++ applying core OOP principles (classes, inheritance, polymorphism, operator overloading, Rule of Three); demonstrates clean class design and systems-level depth.

Education

- **Networking:** TCP/IP, VLANs, Layer 2 switching, DHCP, DNS, basic routing; hands-on with Cisco and Grandstream hardware.
- **Systems:** Linux CLI (users, permissions, firewalling, systemd), Windows Server (AD, DNS, DHCP, GPO).
- **Low-Level Programming:** C — data structures (linked lists, stacks, queues, trees), memory management, pointers.
- **OOP:** C++ — classes, inheritance, polymorphism, operator overloading.
- **Backend:** Node.js, Express, REST API design, PostgreSQL, SQLite.
- **VoIP:** Avaya IP Office — SIP provisioning, extensions, troubleshooting.
- **Scripting:** Bash, PowerShell, Python.
- **Security & Virtualization:** Segmentation, hardening, Fortinet, Fail2Ban, UFW; VMware, VirtualBox, Azure.
- **Tools:** Wireshark, Nmap, GLPI.
